Booking • Tracking • Delivery

Smart • Secure • Simple

1 Introduction – Courier Management System

What is Courier Management System?

- A digital platform for managing the courier process.
- Covers booking, dispatch, tracking and delivery.
- Makes courier operations faster and easier.

Why is it Needed?

- Track parcels in real-time.
- Reduce manual work and errors.
- Improve delivery efficiency.
- Provide better customer service.

BOOK → TRACK → DELIVER

2 Objectives of the System

01 Simplify the booking and dispatch process.

02 Track parcels and delivery status.

03 Manage customer and courier details.

04 Reduce errors and improve efficiency.

05 Provide a user-friendly interface.

SYSTEM GOALS

Faster
Better Delivery

4 System Workflow

From Booking to Delivery — All in One System

Simple process • Real-time visibility • Better control

6 Project Timeline

Planning	Requirement Analysis & Planning	1 Week
Design	UI/UX & Database Design	1 Week
Development	Frontend & Backend Development	3 Weeks
Testing	Bug Fixing & User Testing	1 Week
Deployment	Final Deployment & Documentation	1 Week

Plan • Build • Test • Deliver

7 Team Division

A. Asber Banu

Team Lead

- Project Planning
- Documentation
- Final Presentation

R. Sona

Backend Developer

- Database Design
- Server Logic
- API Integration

N. Bhuvaneswari

Frontend Developer

- UI Design
- HTML, CSS, JS
- User Interface

E. Amirtha valli

Tester & Support

- Testing
- Bug Fixing
- User Support

Together We Build Better • Collaborative • Organized • Trackable

8 Conclusion

Courier Management System

- Makes the courier process simple, fast and organized.
- Supports booking, tracking and delivery management.
- Reduces manual work and improves efficiency.
- Provides better visibility for customers and administrators.

READY TO DELIVER

Thank You!

Smart • Secure • Simple Courier Management
